INSTITUTIONAL COLLABORATION PROPOSAL

Matrix Spaces Australia

Applied innovation for the built environment

Industrialised interiors • Retrofit • Asset intelligence
Preventive asset care • Workforce capability

A collaboration platform for government, universities, asset owners, incubators and strategic industry partners.

PROPOSAL LEAD

21 years enterprise leadership

Confidential discussion document • September 2026

EXECUTIVE PROPOSITION

One integrated platform. Four institutional outcomes.

Matrix Spaces connects delivery, digital asset information and preventive care—creating a practical pathway from research and demonstration to repeatable Australian capability.

01 Delivery capacity

Shift repeatable interior work toward controlled, component-led production and installation.

02 Lifecycle value

Connect retrofit, component records, maintenance history and planned replacement.

03 Applied research

Create a real-world testbed for DfMA, asset intelligence and whole-of-life performance.

04 Skills transfer

Develop hybrid construction, manufacturing, digital and asset-management capability.

PROPOSED FIRST ENGAGEMENT: 90-DAY CO-DESIGN AND FEASIBILITY PROGRAM

Why now

Delivery ambition is colliding with capacity constraints.

1.2M

National Housing Accord target

New well-located homes over five years from mid-2024

$242B

Major public infrastructure pipeline

Five-year outlook, 2024–25 to 2028–29

141K

Current infrastructure worker shortage

Estimated as at October 2025

350+

Victorian MMC homes

Across current Homes Victoria programs

The opportunity is to add capacity by combining manufacturing discipline, repeatable interfaces, digital information and planned asset care.

Sources: Housing Australia Corporate Plan 2025–26; Infrastructure Australia, 2025 Infrastructure Market Capacity Report; Homes Victoria, “Delivering homes for Victorians using modern methods of construction”, 14 Sep 2026.

System integration

From fragmented project phases to one measurable lifecycle.

TODAY	MATRIX SPACES	FUTURE STATE
Design separated from delivery	Coordinating layer	Design for manufacture and assembly
Site-intensive interior construction	Coordinating layer	Componentised interiors and retrofit
Information loss at handover	Coordinating layer	Structured asset information
Reactive, fragmented maintenance	Coordinating layer	Preventive whole-of-life asset care

Matrix Spaces connects physical components, project controls, asset data and service delivery.

The operating spine

Execution experience behind the proposal.

His contribution is the operating judgement developed through institutional fit-out, occupied-site delivery, multi-location maintenance and enterprise leadership.

29 years

Continuous entrepreneurship

350+

Fit-out & refurbishment projects

400+

Premises under preventive maintenance

9 states

Multi-jurisdiction delivery experience

Certified systems

ISO 14001 environmental and ISO 45001 occupational health & safety management.

Owned digital capability

Proprietary CRM, project tracking and asset-condition analytics software.

Institutional clients

Banking, corporate and infrastructure programs, including TATA Projects at Jewar Noida International Airport.

Five connected workstreams

A platform designed for demonstration, evidence and adoption.

01 Industrialised interiors

Configurable components, standard interfaces and installation-ready documentation.

02 Retrofit kits

Repeatable upgrade packages for occupied housing, education, health and commercial assets.

03 Asset intelligence

Component identity, condition, warranties, service history and lifecycle actions.

04 Preventive asset care

Scheduled inspections, risk priorities, planned replacement and portfolio reporting.

05 Skills & research

Work-integrated learning, micro-credentials and practitioner-led applied research.

PARTNER VALUE

Why institutions engage

One proposition, tailored to each partner’s mandate.

U

Universities

Living-lab research, real asset data, multidisciplinary projects, higher-degree research and commercialisation pathways.

G

Government & asset owners

A bounded method to test MMC, low-disruption retrofit, lifecycle information and preventive maintenance.

I

Incubators

An experienced founder, established operating methods and clear Australian customer-discovery milestones.

S

Strategic industry

Access to component development, pilot delivery, qualified supply-chain participation and scalable service models.

SHARED VALUE: evidence • capability • adoption • commercialisation

FLAGSHIP COLLABORATION

A living laboratory for applied innovation

Recommended entry point: a controlled real asset becomes the research, training and demonstration environment.

Research

Test component-level information, maintainability, retrofit sequencing and lifecycle decisions.

Estate value

Create a structured baseline and measurable improvements in asset information and service planning.

Learning

Engage students, researchers, facilities teams and industry in one applied program.

Demonstration

Produce a visible, evidence-backed reference site for further partners and adoption.

Australian precedent: UQ and the University of Melbourne have used campus estates as digital-twin and asset-management living laboratories.

PILOT PATHWAY

Stage-gated delivery

A disciplined route from priority problem to scale-ready evidence.

0 — 90 days

Co-design

Define the host problem, baseline, pilot asset, roles and evaluation framework.

→

1 — 3–6 months

Design & validation

Develop interfaces, technical documentation, prototype and assurance pathway.

→

2 — 6–12 months

Live pilot

Deploy the selected system or service and capture agreed performance data.

→

3 — Decision gate

Adoption pathway

Refine, replicate or scale through a commercial, research or procurement pathway.

Each phase proceeds against jointly agreed scope, governance and evidence thresholds.

MEASURABLE VALUE

Evaluation framework

Success is defined by evidence—not aspiration. Targets are established after baseline assessment.

Delivery

Cycle time, onsite labour, installation productivity and disruption hours.

Quality

First-time acceptance, defects, rectification and component traceability.

Lifecycle cost

Out-turn cost, service events, forecast accuracy and planned replacement.

Environment & safety

Material efficiency, reuse, transport, exposure and corrective actions.

Asset intelligence

Data completeness, retrieval speed, repeat failures and planned/reactive work ratio.

Capability & adoption

Skills outcomes, supplier participation, repeat demand and commercialisation milestones.

Collaboration models that work

Australia validates this partnership architecture.

16+9

Western Sydney University Smart Built Hub

Sixteen major industry participants and nine universities supporting a collaborative DfMA and offsite-manufacturing facility.

4K+

RMIT CAMS

Research translated into a predictive asset-management platform supporting more than 4,000 facilities in Australia and internationally.

250

Homes Victoria MMC program

A pre-approved supplier panel supporting 250 Regional Housing Fund homes through modern methods of construction.

UQ

Campus digital-twin living lab

Cross-disciplinary campus data used for infrastructure, occupancy, mobility and asset-management applications.

COMMON SUCCESS FACTORS: a real problem owner • an applied testbed • committed partners

Governance by design

Governance designed for institutional confidence.

JOINT PILOT STEERING GROUP

Host partner

Defines the priority problem, asset context, operational constraints and adoption pathway.

Research partner

Designs the method, verifies the baseline, evaluates outcomes and leads knowledge translation.

Matrix Spaces

Contributes operating methods, pilot design, project controls, software configuration and commercialisation leadership.

Technical partners

Provide Australian engineering, code, digital, supply-chain and delivery assurance.

Host asset owner • Research & evaluation lead • Mr Narang / Matrix Spaces • Technical assurance

Five-year pathway

Localise. Demonstrate. Productise. Replicate. Scale.

01

Localisation

Australian entity, advisory network, customer discovery, compliance mapping and first host institution.

02

Demonstration

Bounded pilots, independent findings, initial training module and first commercial engagement.

03

Productisation

Component library, installation methods, asset-data requirements and service protocols.

04

Replication

Second asset class or jurisdiction, qualified suppliers and recurring service growth.

05

Scale

Licensing, joint venture, contract manufacturing or Australian assembly capability.

COLLABORATION INVITATION

Define one problem worth solving together.

PROPOSED NEXT STEP

1

Convene a 90-minute workshop

Frame the priority problem, users, asset context and evidence needs.

2

Shape a 90-day feasibility brief

Agree scope, roles, baseline, governance, pilot options and decision gates.

Prepared for institutional discussion •
